

JavaScript Lab 2

Question 1: Tip of the Day

1. Create an array that contains **10 JavaScript tips**.
 - Each element in the array should be a **string**.
 - Each string represents one useful JavaScript tip.
 2. Display a **random tip** from the array every time the page is opened.
 - This will act as a **"Tip of the Day"** feature.
-

Question 2: Students Grades

1. Create an array that holds the following students grades:
`60, 100, 10, 15, 85`
 2. Perform the following tasks:
 - a. Sort the array **numerically in descending order**.
 - b. Using the **sorted array**, find the **highest student degree** that is **less than or equal to 100**.
 - Use the `find()` method.
 3. c. Print the grades of all students who scored **below 60**.
-

Question 3: Students Data

1. Create an array of objects where:
 - Each object represents a student.
 - Each object has two properties:
 - `Name`
 - `Degree`
2. Perform the following tasks:
 - a. Find the **student name** who got a degree **between 90 and 100**.
 - Use the `find()` method.
3.
 - b. Print the **names of students** who got a degree **less than 60**.
 - c. Add a **new student** to the array, then use `forEach()` to print **all students**.
 - d. Remove the **last student** from the array, then use `forEach()` to print **all remaining**

students.

e. Sort the array **alphabetically** based on the student name.

f. Use the `splice()` method to add **two new students after the second element** of the array.

g. Use the `splice()` method to remove **one student after the third element** of the array.
