

Ruby on Rails: Lab Day 2

Lab 2A: new_rails

For this section, you will be working with the `new_rails` repository.

- **Setup:** Fork the `new_rails` repo and clone it to your local machine (will make it's Url available).
- **Branching:** Create a new branch from `main` and name it `lab_two_a`.
- **Resource Creation:** Create one resource manually by hand (route, controller, view, and model files).
- **Committing:** Make sure to create a separate commit for each part of the resource creation.
- **Reading Assignment (Active Record):** Read this article on the [Active Record Pattern vs Repository Pattern](#). Summarize your learnings in your Pull Request (PR) description.
- **Reading Assignment (Migrations):** Read this article on [Ruby on Rails Migrations](#). Summarize your learnings in the same PR description. Make sure to write a sufficient and detailed description.
- **Submission:** Push the changes to your remote repository and open a PR to my repository. Make sure to open the PR against the `main` branch of my repo.
- **PR Title Format:** Your PR title must follow this exact format:
`<your_name>/lab_two_a`

Lab 2B: Fishing Bugs!

For this section, you will be working with a specific bug-hunting repository (link to be provided).

- **The Setup:** Fork the provided repository, clone it, and create a new branch from `main` named `lab_two_b`.
- **The Game:** Your goal is to find and solve all the bugs in the provided code.
- **Verification:** To know that you've successfully solved all the bugs, hit the `/users` endpoint in your browser. If it returns a `200` status with text, then you are done!
- **Proof of Completion:** Take a screenshot of the `/users` endpoint working successfully in the browser and attach it to your PR description.
- **Submission:** Finish the requirements, push the changes to your branch in your forked repo, and create a PR to the `main` branch of my repo.
- **PR Title Format:** Your PR title must follow this exact format:
`<your_name>/lab_two_b`

Bonus Challenges

- **Ruby Object Model:** Read this article on the [Ruby Object Model](#) and summarize it in your `lab_two_a` PR description.
- **Ruby Modules:** Read this article on [Modules in Ruby](#) and summarize it in your `lab_two_a` PR description.

General Notes & Reminders

- Make sure your commits are logically separated (create a separate commit for each step or bug).
- Always write a clear, detailed description for your Pull Requests.
- Keep your local and forked `new_rails` repo, as it will continue with us through the rest of the course.
